

ARIADNE

THREADS OF CULTURE

Discover. Understand. Experience.

Ariadne is an AI-powered cultural navigation platform that helps travelers discover, understand, and experience the world's museums and cultural heritage sites.

Inspired by Ariadne's thread in Greek mythology, it guides visitors through the complexity of the cultural world - from choosing where to go in a city to deciding what to see inside a museum or heritage site, how to experience it, and why it matters.

Ariadne combines structured cultural research, AI, human expert review, maps, and curated routes to identify the most meaningful visitor experiences. It can guide users through artworks and artifacts as well as architecture, archaeological sites, gardens, historic spaces, landscapes, and viewpoints.

Ariadne answers a simple question: "I'm here. What should I see?"

Its purpose is not simply to provide more cultural information, but to turn overwhelming choice into a clear, meaningful journey - connecting discovery with understanding, and understanding with memorable experience.
